

CLAIMS

I Claim,

1. A loudspeaker set provided with an elastic adaptation device including two units of loudspeaker adapted to both side panels of an LCD monitor is characterized by that a casing of each unit of speaker contains an adaptation part for the loudspeaker to be adapted to a side frame of a monitor and both units of loudspeaker are connected to each other by means of an elastic device to be respectively adapted to both side frames of the monitor.
2. A loudspeaker set provided with an elastic adaptation device as claimed in Claim 1, wherein, the elastic device contains a coil spring type of cable controller and an elastic member; the coil spring type of cable controller being fixed into a first loudspeaker, one end of the elastic member winding up in the cable controller and another end attached to a second loudspeaker.
3. A loudspeaker set provided with an elastic adaptation device as claimed in Claim 2, wherein, the elastic member relates to an elastic strap.
4. A loudspeaker set provided with an elastic adaptation device as claimed in Claim 1, wherein, the elastic member relates to an elastic strap.
